POWER OUTAGE RESTART OPTION DESCRIPTION
(PORO)

For customers that have interruptions in their in- coming power supply to the compressor and must maintain an uninterrupted supply of compressed air, the Power Outage Restart Option allows an Intellisys® compressor to restart automatically 10 -60 seconds (adjustable) after incoming power is restored. The Power Outage Restart Option is turned on by using the customer set routine on the Intellisys® controller. The restart time delay, which is adjustable from 10-60 seconds, can also be adjusted while in the set routine on the Intellisys® controller. Any time power is restored to the compressor after a power interruption, a horn located on the side of the starter box will sound during the restart time delay (1-60 seconds), after which the compressor will automatically start. After starting, the compressor will return to the mode of operation that the compressor was in prior to the power interruption. This option also includes Remote/Start stop function.
