

ELECTRONIC SSD-PLUS DRAINS Level Sensing

Ref: 21502.01
Date: 8 January 2000
FIRST EDITION

Davidson, NC 28036

EQUIPMENT SPECIFICATION

SSD-Plus Drain Series

Electronic Condensate Drain providing economic and efficient condensate discharge without valuable air loss from the compressed air system.

A level sensor located within the drain bowl constantly monitors the liquid level. When the liquid level reaches a predetermined point, a solenoid valve is opened and liquid is dis-

charged under pressure. A small amount of condensate is left in the bowl after the valve has closed, so eliminating any unnecessary loss of valuable compressed air.
